
Traditional Structures wins early accreditation to new fabricated structural steelwork standard

DID YOU KNOW from December 2020 **ALL** structural steelwork projects and project specifications which refer to the NSSS (National Structural Steelwork Specification) must be certified to the Welding Quality Management Systems standard BS EN 3834: 2005?

Traditional Structures is proud to be one of the first companies in the fabricated structural steelwork sector to have undergone and successfully passed an SCCS audit to BS EN 3834-2: 2005. This means that we can supply BS EN 3834 compliant and certified materials to all of our customers.

WHAT DOES THIS MEAN TO YOU? Main Contractors, Engineers and Clients have a responsibility to ensure that their chosen structural steelwork fabricator has successfully completed an audit to BS EN 3834 and that the audit has been carried out by a recognised notified body – BCSA and SCCS are the industry bodies leading this improvement.

Failure to meet the requirements of the Project's specification could potentially invalidate the products CE Certificate resulting in embarrassing financial and programme implications and the inability to acquire insurance for the structure.

No one does it better, no one takes more care

Traditional Structures Ltd offer a comprehensive service focused on working with end users, main contractors and design teams to help deliver successful projects each and every time. With a company motto 'No one does it better, no one takes more care'.

To help strengthen and support our success Traditional Structures Ltd have also achieved a myriad of accreditations including but not limited to: Execution Class 3 CE marking to BS 1090, ISO 9001, ISO 14001, RISQS, Achilles UVDB, CHAS, BIM Level 2, Silver Sustainability and Construction Line Gold in addition to our new certification to BS EN 3834-2. These allow us to meet the standards and requirements of all leading construction companies as well as Architects & Engineers.

WANT TO KNOW MORE? Please do not hesitate to contact a member of our management team should you wish to learn more about BS EN 3834 and the benefits that Traditional Structures Ltd can bring to your project.
